Rathbone Multi-Asset Defensive Growth Portfolio

S GBP ACC
30 September 2026

Risk target

50% of the FTSE Developed stock market index volatility.

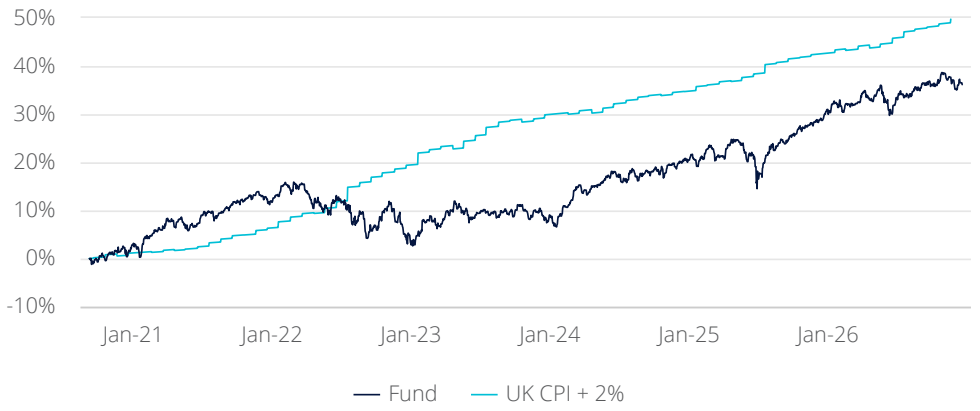
Investment Objective

The objective of the fund is to deliver a greater total return than the Consumer Price Index (CPI) measure of inflation + 2%, after fees, over any rolling five-year period by investing with our Liquidity, Equity-type risk and Diversifiers (LED) framework. The fund seeks a level of volatility that is half of the volatility of the FTSE Developed stock market Index (or up to 10% above or below this level).

There is no guarantee that this investment objective will be achieved over five years, or any other time period.

We use the CPI + 2% as a target for our fund's return because we aim to grow your investment above inflation. We refer to the amount of volatility risk our fund seeks to take because we want our investors to understand the risk they are taking in terms of the global stock market.

Fund performance Since inception



19.06.2020 to 30.09.2026, mid-mid, percentage change. **Past performance should not be seen as an indication of future performance. The value of investments and the income from them may go down as well as up and you may not get back your original investment.**

Important Information

Copies of the Prospectus, the Key Investor Information Document (KIID), the Supplementary Information Document (SID), and application forms may be obtained, free of charge, from Rathbones Asset Management Limited.

Strategy AUM is composed of the AUM of funds that share an investment strategy and similar regulatory constraints and are managed by the same fund management team. Where the funds are denominated in different currencies these have been converted into the share class currency of this factsheet as at month end using the European Central Bank exchange rate.

Investors should carefully read the Key Investor Information Document (KIID), Supplementary Information Document (SID) and Prospectus for detailed investor risks and before making an investment decision.

The value of investments and the income from them may go down as well as up and you may not get back your original investment.

For more details on the investment policy please refer to the prospectus.

As the Manager's annual fee is taken from capital, that capital may be eroded or growth restricted to the extent of the charge and that, while there may as a result be a reduction in liability for Capital Gains Tax, there will be some increase in Income Tax liability for tax paying shareholders.

Details of tax levels and reliefs may change in the future. The value of any tax relief depends on individual circumstances. If you have any doubts about your tax position, or the suitability of this investment, you should seek professional advice.

Changes in rates of exchange between currencies may cause the value of investments to decrease or increase.

Emerging markets are volatile and may suffer from liquidity problems.

The use of derivatives for investment purposes may increase the volatility of a sub-fund's net asset value and may increase its risk profile.

Important Notes

If you require clarity on any of the terms used in this factsheet then please refer to our Supplementary Information Document for further explanation.

Source performance data Morningstar.

The ongoing charges figure (OCF) includes the Annual Management Charge and all appropriate costs that may be deducted from the fund's assets, in line with current regulatory and industry guidance. Where appropriate, the OCF may include a synthetic element relating to the costs incurred in underlying collective investment undertakings, where permitted by the Prospectus. The OCF is included in the Annual or Interim report and are calculated biannually.
